Engage with science

2009 brings a full year of engaging science at COSI

Columbus' Center of Science and Industry is not an ordinary science museum, but one that offers interactive opportunities for visitors of all ages. With a rich heritage of providing engaging experiences that use real science and real life, COSI invites groups from across North America to come and play.

Coming in the summer of 2009, from May 30–Sept. 7, is an exhibit called "Lost Egypt: Ancient Secrets, Modern Science." COSI has created a hands-on exhibit about the science of Egypt and archaeology. A team of COSI employees, along with WOSU Public Media, traveled to Egypt to learn firsthand knowledge about Egypt, its treasures, and its mysteries. WOSU videotaped interviews with scientists, archaeologists, and researchers that will be used in the exhibit, which will also include many on-loan artifacts. Guests can try their skills

at a field site and tomb to see what it is like to excavate and preserve ancient artifacts.

In the fall of 2009, COSI will be showcasing a new technology and innovation exhibit, "Innovation Showcase." By partnering with Battelle and Ohio State University, COSI has brought together an opportunity for young companies, particularly tech companies, to get visibility with their innovative products so people can understand what it takes to create inventions.

Coming in winter 2009, Labs in Life @ COSI, will allow guests to watch research in progress as OSU scientists study body composition and physical activity. The labs will contain a treadmill, a cycle ergometer, and instruments that measure bone density, body fat, and muscle. Visitors can complete a scorecard and compare themselves to their peers as well as some
